

FOR IMMEDIATE RELEASE

Modbus Organization Releases Modbus TCP Developers Toolkit v3.0

February 24, 2010 — Modbus Organization is pleased to announce the release of version 3.0 of the **Modbus TCP Toolkit**. This new version replaces version 2.1 and includes some new resources for developers seeking to implement Modbus. These include an updated test tool, Modbus Conformance Test Tool v3.0 (and accompanying updated test specification), and various other resources for implementation and device testing. Use of these resources speeds development and allows developers to prepare for conformance testing at a certified Modbus Organization Conformance Test Lab.

The upgraded conformance test tool provides broader test coverage with more flexible configuration to test nearly any memory architecture. Developers can test specific function codes or run the full test suite. Each test sequence is logged for post-test evaluation.

The new test tool is now being used in the Modbus Organization's Device Certification Program, available to all suppliers. Modbus member companies participating in the organization's self-testing program will also be switching to the new test tool.

The price of the Modbus TCP Toolkit is USD \$500.00 plus shipping and handling; purchasers of previous versions of the Modbus TCP Toolkit can purchase an upgrade for USD \$99.00 until July 31, 2010.

About Modbus-Organization, Inc.

Headquartered in Massachusetts, the Modbus Organization is an association of users and suppliers of automation devices. The organization works to support the Modbus protocol, provide information and tools for individuals and companies using Modbus. It maintains the authoritative website for Modbus information. Additional information about the Modbus Organization can be found on the organization's website, www.modbus.org.
