Acromag Announces 7-Year Extended Warranty Program

Continuous improvements in engineering and manufacturing, including an ISO 9001 and AS9100 certified quality management system, enable Acromag to offer an industry-leading warranty program.

Wixom, MI: Acromag has implemented an industry-leading 7-Year Extended Warranty program. All Acromag products now carry a base 1-year warranty, but qualify for up to six years of additional warranty protection when registered on Acromag's website, www.acromag.com. Most products, including best-selling BusWorks® and EtherStax® Ethernet I/O, Modbus I/O, 600 Series isolators, Flat Pack transmitters and IntelliPack® signal conditioners, are eligible for a 6-year warranty extension. 8B modules, 150T transmitters, APM panel meters, specialty instruments and accessories can double the warranty period to two years.

Acromag's quality management system is certified for compliance with AS9100 quality standards. AS9100 is a widely adopted and standardized quality management system for the aerospace industry. AS9100 fully incorporates the entirety of the current version of ISO 9001:2000 quality management standard, while adding additional requirements relating to quality and safety.

Many other practices have also led to significant advances in quality control. Acromag takes every measure to guarantee dependable operation and products that perform at or beyond their rated specifications. State-of-the-art manufacturing and military-grade components add an extra degree of ruggedness. All products are built to comply with IPC-A-610 Class II standards by IPC-A-610 certified assemblers, inspectors, technicians and supervisors. Printed circuit boards are purchased to IPC-6012 Class III standards and receive 100% in-house inspection. An advanced water purification and board cleaning system prevents the introduction of contaminants in the manufacturing process. Plus, a strict static control program adopts the ANSI/ESD S20.20 standard as guide for controlling static discharge.
