Press Release

Advanced PAC products from ASCON

As automation technologies continue to evolve, Ascon has introduced two new Programmable Automation Controllers…tradename SigmaPAC and Sigma microPAC. Both PAC models introduce precision control and analog and digital control in a fully distributable hardware platform.

![SigmaPAC](image1.png) ![Sigma microPAC](image2.png)

The SigmaPAC and Sigma microPAC include advanced PID with auto-tune functions and can handle virtually any number of logic and sequence routines. In addition, both PACs come with Modbus TCP/IP ports and multiple Modbus serial ports. Both SigmaPAC and Sigma microPAC are configured with easy to use and low cost graphical IEC61131 programming software called OpenPCS.

The Sigma microPAC is ideal for small to medium sized processes and includes onboard analog and digital IO with some remote and expansion IO capabilities.

The SigmaPAC IO modules are connected using standard off the shelf RJ45 connection and support CANopen high speed communications. All IO modules are high accuracy, fully isolated, and hot swappable.

Ascon is a multi-national industrial controls and automation engineering and manufacturing company with offices worldwide. For more information on Ascon, please see us on the Internet at [www.asconcorp.com](http://www.asconcorp.com), or call us at (630) 482-2950.
