eWON Product News

RoHS compliance

Every eWON leaving the factory is now equipped with RoHS compliant components.

This major change affecting the whole bill of material was the first step towards a full RoHS compliance. A second stage, currently planned for February 2006, will adapt the manufacturing process to the new directive.

All eWON products shipped as of April 1, 2006 will rightfully bear the No Pb logo.

eWON Gets UL Certification

On October 14, 2005, eWON received the certificate from the Canadian Standard Association for product class 3862 11 (CSA 60950-1-03) and 3862 91 (CSA 60950-1-03/UL 60950-1) certified to U.S. standards, paving the way for eWON's launch by the company's newly appointed U.S. distributor: Spectrum Controls.

Spectrum Controls distributes eWON in Canada, the United States, and Mexico under the name of WebPort.
